PROFESSIONAL SUMMARY

AI, backend, and data engineer (final-year B.Tech, Computer Science with Data Science) who designs and ships production Large Language Model (LLM) applications, data pipelines, and APIs. Strong in Retrieval-Augmented Generation (RAG) and agentic systems, Extract, Transform, Load (ETL) and machine learning workflows (**Airflow**, **dbt**, **XGBoost**, **MLflow**), and **FastAPI** and **Next.js** services, with merged open source contributions to Better Auth (**29k+** GitHub stars) and Corsair (YC W25).

EXPERIENCE

Wipro Limited - Enterprise AI Automation - Bengaluru, India - Jun 2025 to Jul 2025

Software Engineering and Generative AI Intern

- Built a Python and SQL pipeline processing **30+** heterogeneous sources (audio, transcripts, code, content), normalizing and validating outputs into structured records for stakeholder reporting.
- Integrated **Azure OpenAI GPT-4o** and Whisper with structured-output validation, turning unstructured inputs into reliable, analysis-ready records.
- Added validation, exception handling, and automated tests, cutting processing time by **40%** with consistent outputs.

TraininGenie - Early-Stage Startup - Remote - May 2026 to Jul 2026

Software Development Intern (Full Stack)

- Took sole ownership of the startup's production website from architecture to launch, building the full-stack app on **Next.js**, a **Turso** edge-first SQL database, and **Supabase** authentication; designed the database schema and API routes powering core product flows.
- Built a reusable shadcn/ui component library and responsive design system, shortening later feature development and keeping the experience consistent across devices.
- Optimized database queries for low latency, shipped **zero-downtime** updates, and led testing, debugging, and deployment while iterating directly on founder feedback.

PROJECTS

ReleaseLens: AIOps and Release Intelligence Platform - Sep 2026 - [GitHub](#)

Python, FastAPI, Apache Airflow, dbt, AWS S3, PostgreSQL, XGBoost, MLflow, OpenTelemetry, Docker, Continuous Integration/Continuous Deployment (CI/CD)

- Building an end-to-end platform ingesting **519K+** historical CI builds and repository signals for pre-deployment risk analysis; designed an **Airflow**-orchestrated ETL pipeline turning raw CI and Git data into validated analytics marts on AWS S3 and **dbt**.
- Training **XGBoost** release-risk models with leakage-safe, time-based validation tracked in **MLflow**; building a **FastAPI** inference service for live risk scoring.
- Instrumenting **OpenTelemetry** to correlate deployments with latency and error regressions and identify root cause and blast radius across distributed services.

Codeglyph: AI Codebase Intelligence and Developer SaaS - May 2026 - [GitHub](#)

Python, FastAPI, React, Turso/libSQL, Supabase, NVIDIA NIM (Nemotron 3), Docker, GitHub API

- Launched a production RAG and agentic code-intelligence SaaS used by **25+ users**, using **NVIDIA NIM**-hosted Nemotron 3 **Super 120B** and **Ultra 550B** for generation and **Nemotron 3 Embed 1B (2,048-dimension embeddings)** for retrieval.
- Built a hybrid retrieval engine combining cosine vector search, keyword search, exact file matching, path-aware ranking, and a repository dependency graph, returning grounded answers with file- and line-level citations.
- Engineered ingestion for repositories up to **5,000 files** and **15,000 chunks** with SHA-256 manifests, incremental re-indexing, and idempotent writes; built an agentic editing workflow that generates multi-file patches and opens pull requests via GitHub OAuth.

Prepvia: Real-Time AI Interview Platform - Jun 2026 - [GitHub](#)

Python, TypeScript, FastAPI, WebSockets, Next.js, MongoDB, Groq Whisper, DeepSeek, Gemini

- Delivered **50+** real-time AI interview sessions using **WebSockets**, live speech-to-text, and adaptive LLM-generated follow-up questions; implemented **MongoDB** persistence and multi-provider failover across Groq, DeepSeek, and Gemini.

OPEN SOURCE CONTRIBUTIONS

Better Auth: TypeScript Authentication Framework (29k+ GitHub stars) - [Merged PR #10388](#) - Jul 2026

- Fixed identity-provider-initiated Security Assertion Markup Language (SAML) single sign-on redirect failures in split-origin deployments with prioritized trusted-callback resolution; added regression tests covering successful and failed authentication paths.

Corsair (YC W25): AI Agent Integration Platform - [Merged PR #491](#) - Jul 2026

- Shipped a Hashnode **GraphQL** integration for AI agents across **10 endpoint groups** with schema validation, pagination, provider error handling, event-payload redaction, and Jest coverage, passing maintainer review.

TECHNICAL SKILLS

Languages and Databases: Python, SQL, JavaScript, TypeScript, PostgreSQL, MongoDB, Supabase, Turso

Data Engineering and ML: ETL Pipelines, Airflow, dbt, AWS S3, XGBoost, MLflow, Data Validation, Event-Driven Architecture, RAG, LLM Applications, AI Agents

Backend and Frontend: FastAPI, REST APIs, GraphQL, WebSockets, SAML, GitHub API, React, Next.js, shadcn/ui

Cloud and DevOps: Azure, Docker, OpenTelemetry, CI/CD, Git, pytest, Jest

Fundamentals: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EDUCATION

Manipal Institute of Technology - Bengaluru, India - Jul 2023 to May 2027

B.Tech Computer Science and Engineering (Data Science) - CGPA: 7.5/10 - Major GPA: 8.0/10

ACHIEVEMENTS AND CERTIFICATIONS

- Hackverse Hackathon: **Top 5 of 50 teams** (IBM SkillsBuild and AWS)
- LeetCode: **150+ DSA problems** solved
- Certifications: MLOps, Deployment and Model Life Cycling (DataCamp); Model Context Protocol (MCP) (Anthropic)
